

# UI Design Fundamental

***UI design** is the design of user interfaces for software or machines, such as the look of a mobile app, with a focus on ease of use and pleasurability for the user*

# Big Principles

## Principles

---

### Consistency

Different sections of the app must be coherent in the design, and there must be a consistent flow of the layout throughout the app.

### Unambiguous

The design elements that are interactive in nature must be clearly depicted.

## Principles cont.

---

### Intuitive

The term 'Intuitive' is often used to describe mobile apps when suggesting that they are very user-friendly.

### Answer User's Queries

When a users tap a button, they want to know whether the process has started and how long will it take.

### Layered UX

Layered here refers that all the features of an app must not be exposed at once.

## Principles cont.

---

### Know your user

Your user's goals are your goals, so learn them. Restate them, repeat them. Then, learn about your user's skills and experience, and what they need.

### Keep it simple

The best interface designs are invisible. They do not contain UI-bling or unnecessary elements.
